

PSI Model 206 D - Blueprinted Upgrade

20 DEC 2011

All competitors are to be advised that PSI Superchargers are now offering their 'D' model 206 supercharger in a blueprinted form. The standard model is still available to customers. The blueprinted model is also available at an additional cost due to the further manufacturing processes employed.

ANDRA Technical has investigated the processes involved in manufacturing the 'blueprinted' model and it is recognised as complying with ANDRA and SFI Supercharger Rulings and Requirements.

The refinements are carried out by PSI during the manufacturing process which include improved internal surfacing through tolerance control to closer match original design specifications, resulting in a higher efficiency from the same model.

Competitors wishing to have their superchargers sealed for compliance can do so by having their superchargers inspected and sealed with proprietary security screws as supplied by PSI. This can be done at a minimal cost by either PSI in Arizona USA, or one of their certified representatives in Australia.

For further information on the high efficiency models, compliance sealing or contact details for certified Australian representatives, please contact PSI Superchargers direct at;
