

Rule Submission Proposals for AA/Oz-Mod & BB/Oz-Mod Sport Compact Grp2

I have been involved & racing in the grp2 Oz-Mod sport compact bracket for a number of years, I currently hold the BB/Oz-Mod national record for speed & have done for over a year.

Rule Submission Proposal 1: Minimum class weights for BB/Oz-Modified
Current minimum weight is 2100lbs

My proposal for a minimum weight of 2250lbs

Rule Submission Proposal 2: Minimum class weights for AA/Oz-Modified
Current minimum weight is 2400lbs
My proposal for a minimum weight of 2550lbs

My reasons for this weight change proposal is for a level playing field, By raising the minimum weights will also be a safer option for these cars going as fast as they have been, Majority of the cars running in these grp2 classes are closer to these proposed weights & in my opinion will be a very cost affective to get to the minimum proposed weights.

These submissions are a safer option for the racers, eg: it will make the little cars more stable at high speeds, I do believe there will be no impact on any other brackets within the sport compact classes, These proposals do however increase the even competition... Will stop cars running the bare minimum to get to the minimum weights, Most cars running are closer to the proposed weights then the current minimum, I do think the new weights are a very practical & are easy to enforce, Costs involved are very low, I'm a firm believer this option is a step in the right direction for the nature of the class.

Regards,

Bryce Miller.
